Hey team so we need to make a decision about our assignment. at the moment the code is writing in node and only a couple of us know it and the code don't really work and to try fault find in unknown code is hard. So we need to decide to 1. Rewrite the code in something we all know or 2. Try to find the errors. Think about it cause we need to make this decision so we can start doing stuff . We can vote if needed

zakpowley 3:49 PM
I was talking to Adon about it, and he pretty much said we get no marks or recognition up until we get it to the same spot it's at currently. I feel like it would be a waste of time to restart, even if we're struggling with it at the start just getting our head around it we can include that in the time spent on the project that we can actually get recognition for because no other group has to take on an already started project it's expected we take a little while to familiarise ourselves both with the code and the language used.

singp10 4:13 PM
I think zak is right

dargjj1_jordan_d 8:20 PM
Elias said if we restarted it we'd lose marks anyway
Even if we did complete it

zakpowley 12:55 PM
If a few people aren't going I'd rather stay at home and just do some study because I have an exam at 3, so would like to get a general consensus on if it's worth going in for.

singp10 1:07 PM
